

FLEXIBILITY WITHOUT LIMITATION

UrbanStone's unique manufacturing process adds a dimension of flexibility in pavement and outstanding landscape design never before seen in Australia.

Variations in paver size, shape, thickness, texture, colour and surface finish give every designer the opportunity to enhance their individual creative designs with quality finishes of exceptional durability.

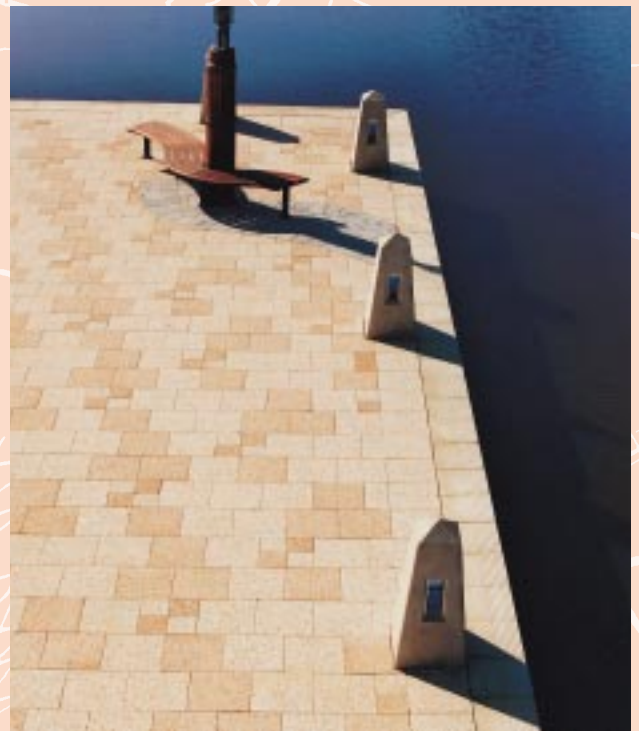

Urban pavespaces gain functionality and completeness when enhanced by UrbanStone's impressive new paving and accessory range.

Border inlays, single bullnoses and special dual-colour stair-treads and tactile pavers have been designed specifically with the disadvantaged and visually impaired end users in mind.

UrbanStone's flexibility allows designers to consider current community needs and demands as well as those of our environment. The virtually unlimited range of colours and textures is available in all product sizes.
